

Product Description:

Water retainers [China super absorbent polymer biodegradable dealers](#) are very easily used throughout the growth cycle of lawns and sod. They ensure good germination, faster root development, and regular and even growth of lawns. The rooting of sod is also faster. They are widely used in landscaping for golf courses and grass in parks and gardens.

WELLDONE SAP® China [SAP polymer powder granule](#) Water retainers the growth cycle of lawns and sod , landscaping for golf courses and grass in parks and gardens.

Super absorbent polymer crystals ensure good germination, faster root development ,regular and even growth of lawns. The rooting of sod is also faster.

Benefit of Lawn and golf courses:

- Reduce frequency of irrigation 50%--70%
- Save money cost
- Save fertilizer 30%-50%
- Improve the density and flatness of the lawn

Method & Dosage:

Method :

- Work, break up, and level the soil to be planted with grass.
- Spread SAP on the surface of the soil. The polymer may be broadcast or applied with a fertilizer spreader for a more even distribution.
- Work SAP into the soil to a maximum depth of 10 cm. This can be done by hand with a spade or mechanically with a disk plow or a rototiller.
- Seed the lawn or lay the sod. Roll the soil to compact it.
- Use fertilizers if needed.
